Equipment acquired in WESET Project

Equipments in Wind Energy Center-ENIS- University of Sfax

Equipment acquired

1st part : Wind Energy Emulator

(Emulateur d'éolienne 0,3 Kw)

2nd part : Real Wind Power Generator trainer

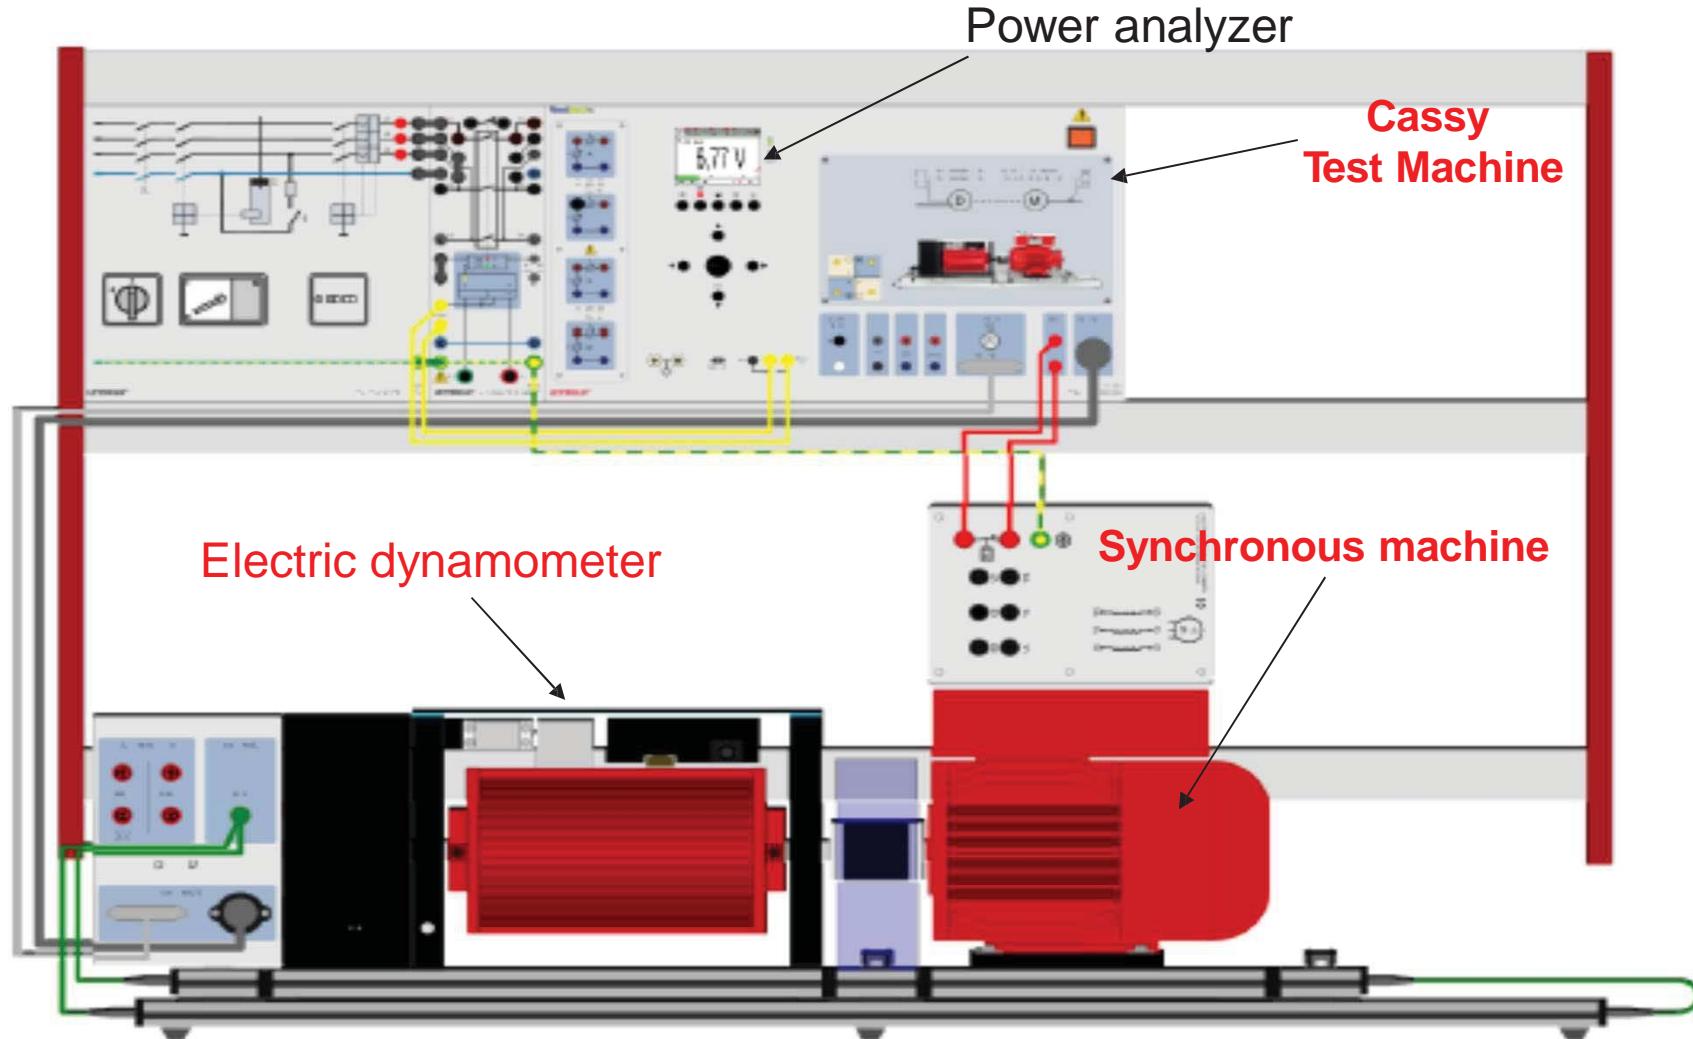

(Eolienne réelle 0.6 Kw avec stockage d'énergie)

Co-funded by the
Erasmus+ Programme
of the European Union

Equipment in the Wind Energy Centre

First test Bench : Wind Emulator (Prototype)

Co-funded by the
Erasmus+ Programme

First test Bench : Emulator on Wind Energy

Machine Test CASSY

Machine Test CASSY is a measuring and control device for use in experiments in electrical engineering, in the fields of electrical machines, drive technology, power electronics and energy technology. It contain:

- Power Analyser (multimeter, wattmeter, energy analyser and recorder)
- Machine test system (control bloc)

Power
Analyser

Machine test

First test Bench : Emulator on Wind Energy

Machine Test CASSY

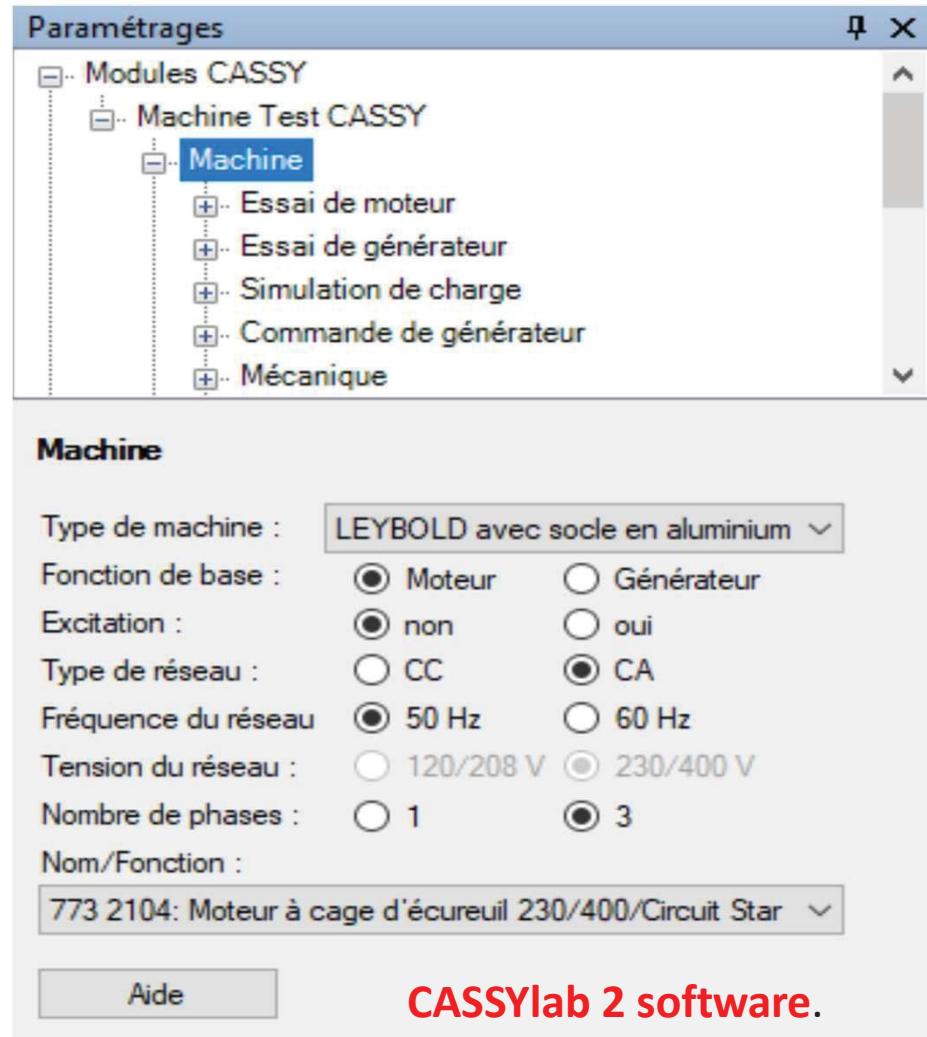

Setpoint setting: manual

setpoint: Internally via:

- the Machine Test CASSY,
- CASSYlab 2 software.

Setpoint: external input via:

- Analogue input E
- LabVIEW™
- Matlab®

The screenshot shows the CASSYlab 2 software interface. The top window, titled "Paramétrages", displays a tree structure under "Modules CASSY" for "Machine Test CASSY". The "Machine" node is selected, revealing sub-options: "Essai de moteur", "Essai de générateur", "Simulation de charge", "Commande de générateur", and "Mécanique". Below this, a larger window titled "Machine" contains various configuration parameters:

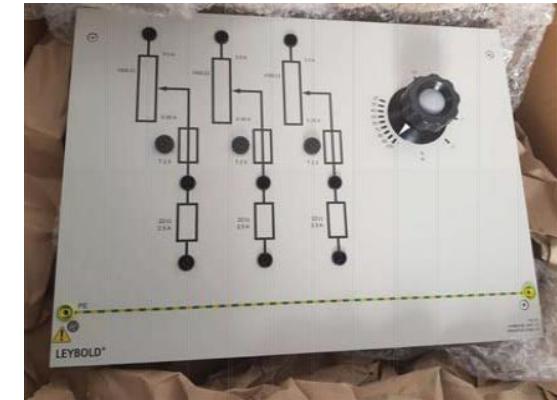

Type de machine :	LEYBOLD avec socle en aluminium	
Fonction de base :	<input checked="" type="radio"/> Moteur	<input type="radio"/> Générateur
Excitation :	<input checked="" type="radio"/> non	<input type="radio"/> oui
Type de réseau :	<input type="radio"/> CC	<input checked="" type="radio"/> CA
Fréquence du réseau :	<input checked="" type="radio"/> 50 Hz	<input type="radio"/> 60 Hz
Tension du réseau :	<input type="radio"/> 120/208 V	<input checked="" type="radio"/> 230/400 V
Nombre de phases :	<input type="radio"/> 1	<input checked="" type="radio"/> 3
Nom/Fonction :	773 2104: Moteur à cage d'écureuil 230/400/Circuit Star	

At the bottom of the window are buttons for "Aide" (Help) and "CASSYlab 2 software".

Second test Bench : Real Wind Power Generator Trainer

General characteristics of the real wind generator:

Facilité d'installation et légèreté du générateur complet + équipement de mât

- Lames en matériaux composites
- Structure en aluminium hautement résistante à la corrosion
- Support pour le couplage hélice-générateur
- Diamètre du rotor environ 1,2 m – Poids environ 6 kg
- Démarrage de la production d'énergie électrique à une vitesse du vent d'environ 3 m/s ; à la vitesse de ~ 12,5 m / sec puissance de sortie 400 W
- Alternateur de type sans balais
- Régulateur de charge interne adaptable en externe à tout type de batterie
- Système de réglage électronique pour contrôler la tension en fonction de la vitesse du rotor et de l'état de charge de la batterie
- Tension de sortie : 12 Vdc
- Sonde anémométrique pour la transmission de la vitesse du vent et valeur de direction vers le panneau de commande et de supervision

Equipment in the Wind Energy Centre

Second test Bench : Real Wind Power Generator Trainer

Internal operating system of the wind generator equipped with a wind generator.

The device allows the use, inside, of an external wind generator on which the blades have been removed. Controlled by an asynchronous electric motor with continuously variable speed directly coupled to the wind generator to simulate the action of the wind.

The change of the motor speed is carried out by a speed variator through a local potentiometer or by PC.

The device is powered by the test bench item N ° 1 (Wind generator) or by the electrical network.

- Characteristics of three-phase asynchronous electric motor

* Output power: 1.8 kW ; Y

Nominal Rated speed: 1,500 rpm; •

- Inverter specifications •

Applicable motor: 2.2 kW; Y

Frequency at nominal output: 0 ÷ 50 Hz.
